Large Scale Utility Grid Connected Renewable Solutions

Program Description:

Ulrich will provide a brief introduction on photovoltaic systems, the improvements Alencon expects to provide, and its place in the current renewable energy market. The presentation will then describe the impact distributed energy generation has (or can have) on the grid, along with some of the advanced controls and functionality that smart converters may provide. This will include the current state of regulations with regards to these devices, and where industry and regulators would like them to be in the future.

Speaker: Ulrich Schwabe, VP of Engineering, Alencon LLC

Ulrich K.W. Schwabe is the VP of Engineering for Alencon, a 5 year old company developing novel inverter and power harvesting technology for the renewable energy industry. Ulrich has been with the company since its inception, and joined the company full time after the completion of his Master's in Electrical and Computer Engineering at Rowan University.

Under his management is the development of 2.5MW inverter modules that can be stacked together to form up a single 100MW inverter, as well as 25kW DC/DC converters used to very effectively harvest energy from photovoltaic systems. He is a voting member of both the IEEE 1547 group, a standard for distributed energy generation interconnection, and the Standards Technical Panel for UL 1741, the most prominent standard in the US for converters and controllers for use in independent power systems. His expertise in power electronics, the design and installation of large scale photovoltaic systems, and their interactions with distribution and transmission grids gives him an interesting perspective on hotly debated issues and topics in the industry.
